

BASELOCK NETWORK

WEAPONS SAFETY AND MANAGEMENT IN A SINGLE SYSTEM

ARMORY AUTOMATION: MANAGEMENT, MONITORING, TRACKING

BASELOCK modules or module groups can be networked with customized IT applications to efficiently manage, monitor and track individual weapons or entire weapons inventories. With a networked system, the authorization and release of weapons can be centrally controlled to ensure complete tracking and documentation of which weapon was used by whom and for how long. If a weapon is not returned on time, a preconfigured alarm is triggered automatically.

MULTI-WEAPON SAFETY AND MANAGEMENT IN A SINGLE SYSTEM

armatix
21st Century Gun Safety

EVERY GUN INDIVIDUALLY SECURED

ARMATIX SECURED. READY FOR USE IN SECONDS.

Armatix helps Gun owners as well as public and private-sector institutions to individually store firearms safely. The BASELOCK multi-weapon security system provides complete security logistics for handgun stocks of every size – in police stations, barracks, security centers, shooting ranges, emergency vehicles or for private use at home. The smart stationary system secures all common handguns - with their magazines - and can connect them with central monitoring processes if desired.

SECURING WEAPONS AND MAGAZINES

A weapon can be secured by pushing it onto a mechatronic locking element integrated in the BASELOCK module; light pressure causes the locking element to engage in the cartridge chamber.

An individual weapon can only be removed after successful authentication by entry of a PIN code, fingerprint sensor or via contactless transponder activation. The entire inventory of weapons can be unlocked locally or centrally with a group code. In an emergency, the weapons can be released, armed and fully operational within seconds.

BASELOCK: LEGALLY COMPLIANT STORAGE

Weapons stored in the BASELOCK security system satisfy all requirements of strictest firearms legislation. They are equally well protected according to Sec. 26, para. 2 as in a gun safe with the highest resistance grade according to DIN EN 1143-1. This has been scientifically and technically certified by a test institute and the equivalence confirmed and approved by Germany's Federal Ministry of the Interior.

MAXIMUM SAFETY IN EVERY SITUATION

FLEXIBLE APPLICATIONS

BASELOCK modules can be combined in any quantity, with every weapon secured individually. Within a group of modules, weapons of different calibers can be included. The modules can be mounted on tables, walls or floors in buildings, at shooting ranges, in emergency vehicles or in private homes. With an extension module, BASELOCK can be adapted for the storage of additional equipment.
